12 Settings

PLAYKIDS | IMPLEMENTATION DESIGN SPECIFICATION

Use this page with the visual boards. The written rules define functionality; the images define visual direction.

01 BRAND & VISUAL IDENTITY

Brand: PlayKids (confirm final naming and legal availability before release).
Tagline: Play • Learn • Grow.
Mascot: consistent golden Learning Star with an open blue book.
Visual direction: premium playful 3D illustration, sky-blue scenes, soft clouds, green hills, rounded white cards, polished borders and subtle shadows.
Assets: primary, horizontal, compact and monochrome logo variants; adaptive app icon and splash screen.

02 FOUR GAME WORLDS

Emoji Matching: picture-discovery world with consistent illustrated cards.
Shape Matching: magical shape garden with accurate geometric objects.
Colour + Shape: rainbow-discovery world; preserve the three learning stages.
Colour Paper: creative art studio with clearly separated colour trays.
Each game has its own environment while sharing one brand system and mascot.

03 LEVELS & PROGRESSION

Target: 25 levels per game, five chapters with five levels each (100 levels total). Unlock the next level only after successful completion. Previously unlocked levels remain accessible.
Include previous-level replay, restart, next level, level map and continue learning. Keep Core Curriculum and Extended Practice progress separate. Save progress persistently and safely.

04 GAME CONTENT

Preserve the original four reference games and core rules. Keep the nine original emoji examples, five original shapes, five original colours, all 25 core colour-shape combinations and the five original colour trays.
Extended practice may add 2D shapes, optional 3D discovery, additional colours and generated combinations, but must remain separate from the core competition curriculum.

05 UI, TEXT & INTERACTION

Use a unified system for headings, body text, labels, buttons, icons, cards, spacing, radii and shadows. Brand name and brand UI may use English; learning instructions and narration remain Bengali.
All visible buttons must perform their advertised actions. Provide default, pressed, selected, disabled and loading states. Use smooth, restrained animations and toddler-friendly touch targets.

06 VOICE, SAFETY & QUALITY

Use one centralized Bengali voice playback system and one selected narrator at a time. Keep speech clear, calm and natural; never overlap narration and effects. Bundle licensed audio for offline playback where available.
Preserve local progress, parent controls and physical-practice guidance. Test screens, navigation, buttons, levels, audio, offline use and saved progress before release.

IMPLEMENTATION & ACCEPTANCE RULES

1. Treat this board as visual guidance, not a flat background image. Rebuild each screen as real, responsive Android UI.
2. Preserve the four original games, core rules, saved progress and separate Core / Extended practice modes.
3. Keep all buttons functional, level navigation predictable, and previous unlocked levels replayable.
4. Use one controlled Bengali narration stream; prevent old and new voices or sound effects from overlapping.
5. Test every screen, interaction, offline path and saved-progress flow before declaring the build complete.
